Ligature Handling in Scientific PDFs

The first figure shows the flow field around a fixed wing. A significant influence of the flap configuration on the wake is visible, and the effect is amplified at high angles of attack.

Plain spellings are mixed in on purpose: first, field, flow and figure are typed without ligature characters, so that a matcher must treat “field” and “field” as the same word.

Long Short-Term Memory (LSTM) models are efficient filters for noisy measurements. An LSTM can be fine-tuned on a small dataset, and its flexibility makes it a popular choice for trajectory fitting.

The baffle experiment and the final flight test are described in Section 4, together with the identification procedure and a brief flutter analysis.
